

## Profiled Sheetting – UrbanPro Storage & Handling

TECHNICAL NOTE  
UKEt-01/02/en/v0

### Storage

UrbanPro sheets and fittings must be stored in a dry, ventilated building on suitable wooden pallets, according to sheet profile and color.

Painted products must not be stored outdoors (in the open air), where atmospheric influences are directly affected. Unpainted products may be stored outdoors if necessary, but they must be protected from the rain.

When the sheets are delivered, the packaging must be removed, the sheets must be left on the pallet and firmly stored on solid ground. Sheets cannot be stored in an open space, sheets should be placed under shelter, and if there is no possibility to do this, we recommend covering loosely with a weather resistant tarp to protect it against the weather elements.

**Note:** Failure to comply with this requirement may lead to efflorescence and cause defects to the sheets or fittings.

### Handling

- When unloading the sheets or fittings, do not push or pull, we recommend taking the products from the edge and for the sheets to be carried on their side.

**Note:** failure to comply with this requirement may lead to mechanical damage to the painted surface.

- We do not recommend loading the products on more than two floors.

**Note:** Failure to comply with this requirement, could cause possible mechanical damage to the lower packaging of the product.

- When loading products by a crane, we do not recommend the use of loading ropes.

**Note: Failure to comply with this requirement, could cause possible defects to the products.**

- When cutting or drilling the sheets, dust should be cleaned/wiped off immediately with a dry cloth.

**Note: Failure to comply with this requirement may lead to discoloration and whiteness.**
